WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

CURRENT TRENDS

Week Ending 25 Mar 1944

The curve for Admissions All Causes dropped again this week bringing it to the lowest point recorded since the second week of Nov. 1943. The highest rate was reported for the 9th District, the lowest for the 8th.

The respiratory disease curve, in line with the seasonal trend, continues to fall. It stands at a point well below that recorded for the corresponding week of 1943. A downward trend is reported in all Districts except the 3rd where a slight upward trend is noted.

The venereal disease rate after remaining for three weeks below 30 rose again this week to 31. The highest rate (49) was reported from the 8th District, the next highest (44) from the 4th District, the lowest (14) from the 6th District.

Influenza and Catarrhal Fever. The curve for these infections continues downward for the 15th consecutive week since the winter's peak was reached in the week ending Dec. 11, 1943. The downward curve follows the usual seasonal trend but it has remained below the 1942 and 1943 curves since the week ending Jan. 22. Until this past week, the 9th District had consistently maintained the highest rate for these diseases, dating back to the peak in Dec. 1943. The reports for the week ending Mar. 25, however, indicate that the 9th District, with a rate of 220, has dropped to second place, having been displaced by the 3rd District (rate of 226). The lowest rate (57) was again reported from the 7th District.

Pneumonia--Broncho and Lobar. After a slight rise last week, the rate this week again returned to 4. The curve appears to be following the usual seasonal trend. The 13th District again reported a disturbingly high rate (17); nine of the Districts and the Potomac and Severn River Commands reported rates of 4 or less; the lowest rate was reported in the 7th District.

Pneumonia, Atypical. For the third successive week the rate for this infection was reported at 3. The curve stands only slightly above that for the corresponding week of 1943

CURRENT TRENDS

and well below the level recorded in Dec. 1943. The highest rate (10) continues to be reported from the 11th District. The 4th, 6th, and 12th Districts reported no cases.

Tonsillitis and Pharyngitis, Acute. The trend of these infections has been generally downward since the week ending Jan. 29. The 9th District reported the highest rate (100), the 7th the lowest (18).

Rheumatic Fever, Acute. For the first time since the week ending Jan. 1, 1944 the rate for acute rheumatic fever returned to 3. Only two Districts reported rates in excess of 4; the 9th District reported a rate of 8, the 13th District a rate of 5.

Scarlet Fever. The scarlet fever rate stands for the fourth consecutive week at 11, a point still above that recorded in both 1942 and 1943 for the corresponding weeks. When compared with the week ending Mar. 18, it may be seen that the rates of all Districts except the 4th, 11th, 13th, and the Potomac and Severn River Commands either decreased or remained stable. It is worthy of special note that the rate for the 4th District (24) showed a 100 per cent increase over the rate for the previous week (12). The 7th District alone reported no cases of scarlet fever.

Cerebrospinal Fever, Meningococcic. Though there was a slight rise in the rate this week for this infection, the curve stands at a comparatively low level. The highest rate (2) was reported for the 4th District; the 6th, 7th, 8th, 12th, and 13th Districts reported no cases.

Malaria. For the seventh consecutive week the rate for malaria stands at about 3, a point well above that recorded for the corresponding period of either 1942 or 1943 and well above the 9-year median (very few of these cases are however autochthonous, the vast majority were incurred abroad). The 11th District reported the highest rate; the 4th District reported no cases.

RESTRICTED

WEEKLY MORBIDITY REPORT

REPORT NO. 117
PAGE 5

CURRENT TRENDS

Measles. A slight rise in the rate for measles this week would appear to be but a minor check in the swing downward in line with the usual seasonal trend. The 1944 curve stands at a point very close to that recorded for the corresponding (13th) week of 1942 and 1943. The 9th District reported the highest rate (34), the 7th District the lowest (4).
